MySQL Workbench.. 2.2.1.3. Install MySQL.2.2.1.4. MySQL Connector/C 7.4.5.. A: *edit* This is now possible. There is a far less resource intensive and more advanced software called MySQL Workbench. I used it today to create and manage a MySQL database in the Delphi IDE. I found the IDE extremely quick to use and I can't believe how hard it is to use MySQL Workbench to create a database using SQL commands. I suggest if you get stuck in the process, save it to some open file in a text editor and refresh the IDE to make some changes. The IDE will update the database based on the text file you created. There isn't a straightforward way to export a MySQL database into a usable Delphi project. I'm not sure if it is feasible for someone without basic MySQL knowledge, but here is what I did. First, create a small SQL database with two tables. CREATE TABLE `t1` (`id` INT UNSIGNED NOT NULL AUTO_INCREMENT, `name` VARCHAR(60) NULL, `age` INT UNSIGNED NULL, PRIMARY KEY (`id`)) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_general_ci; CREATE TABLE `t2` (`id` INT UNSIGNED NOT NULL AUTO_INCREMENT, `name` VARCHAR(60) NULL, `age` INT UNSIGNED NULL, PRIMARY KEY (`id`)) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4 COLLATE=utf8mb4_general_ci; Then add some rows to the tables. INSERT INTO `t1` VALUES (NULL, 'Mike', 28); INSERT INTO `t1` VALUES (NULL, 'Brian', 21); INSERT INTO `t1` VALUES (NULL, 'Joe', 46); INSERT INTO `t2` VALUES (NULL, 'Mike', 21); INSERT INTO `t2` VALUES (NULL, 'f678ea9f9e
